

Solution Requirements

Date	25 September 2026
Team ID	6ab2220abee0b08a2d2c65d0
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Users log in via ServiceNow SSO / LDAP credentials to access the Service Portal.	High
2	Authorization levels	End Users submit tickets. ITIL Users view/resolve. Admins configure rules.	High
3	External interfaces	Express.js REST API allows external systems to submit tickets via POST /api/tickets.	Medium
4	Transactions processing	Each ticket triggers a Business Rule that parses keywords and auto-assigns Category/Subcategory.	High
5	Reporting	ServiceNow native reporting dashboards display ticket volume by Category.	Low
6	Business rules	Server-Side JS Business Rule uses indexOf() to match keywords and set fields.	High
7	Compliance	Data stored on ServiceNow cloud compliant with SOC 2 Type II and ISO 27001.	Medium
8	Other	Flow Designer sends automated email confirmation to the caller upon ticket creation.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Business Rule must classify ticket before DB commit.	Response time < 1 second
2	Scalability	System must handle enterprise-level ticket volume.	Supports 10,000+ concurrent users
3	Security & Data Privacy	All data encrypted in transit and at rest.	TLS 1.2+, SOC 2 compliant
4	Reliability & Availability	ServiceNow guarantees platform uptime.	99.8% uptime SLA per month
5	Usability & Accessibility	Portal form must be simple: type and submit.	No mandatory dropdowns
6	Other (Maintainability)	Keyword dictionary expandable without code changes.	Admin adds keywords via BR editor
