

Customer Journey Map Auto Ticket Classification using Flow Designer

	?? Submitting & resolving an IT support ticket	?? Discover How does the user first become aware of their IT issue?	?? Submit What does the user experience as they submit the ticket?	?? Classify In the key moments of classification, what happens?	?? Resolve What does the user experience during resolution?	? Close What happens after the issue is resolved?
1 Steps What does the person typically experience?	WiFi stops working or projector fails during a meeting	Opens ServiceNow portal, fills in Short Description field	Flow Designer triggers instantly, parses keywords, sets Category	Assigned technician receives routed ticket and begins work	Issue is fixed, ticket is closed, confirmation email is sent	
2 Interactions ?? People: Who do they talk to? ?? Places: Where are they? ?? Things: What tools do they use?	Colleagues confirm the issue is not just local. User checks their own device first.	Interacts with ServiceNow Service Portal UI. Types "WiFi not working in library".	No human interaction needed. Flow Designer Business Rule executes in background.	IT Agent opens the pre-categorized ticket in their queue. Contacts user if needed.	Receives automated email: "Your ticket has been resolved." Rates service.	
3 Goals & Motivations At each step, what is the person's primary goal?	"Help me get back to work as fast as possible."	"Let me describe my issue clearly and submit it quickly."	"I want the system to understand my issue without me selecting categories."	"I want a skilled technician, not a generic dispatcher."	"I want confirmation that it's truly fixed so I can move on."	
4 Positive Moments What steps does a typical person find enjoyable, productive, or exciting?	Realizes the portal is easy to access from any device.	Surprised that they only need to type a short description  no complex forms.	Amazed that category was auto-filled instantly without manual selection.	Receives a confirmation email within seconds of submission.	Issue resolved much faster than expected thanks to correct routing.	
5 Negative Moments What steps does a typical person find frustrating, confusing, or annoying?	Frustrated that the issue is blocking their work entirely.	Unsure what exactly to type in the description field.	If keyword is not recognized, ticket may remain uncategorized.	Waiting for the technician to pick up the ticket can feel slow.	No follow-up survey to share detailed feedback.	
6 Areas of Opportunity What could we do better? What ideas do we have?	Add a self-service knowledge base so users can fix common issues themselves.	Provide auto-suggest while typing the description to guide users.	Expand keyword logic to NLP/ML model for better accuracy.	Add SLA timers and priority-based escalation rules.	Send a satisfaction survey after closure to measure CSAT.
