#### Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

#### Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team was assembled with 4 members: a ServiceNow Admin (Developer), a QA Tester, a Flow/UX Designer, and a Project Lead. After collaborative discussion, the team identified the core problem: IT helpdesks waste 20%+ of agent time manually categorizing tickets, while end-users struggle with complex dropdowns.

##### Step-1: Team Gathering & Problem Selection

  
**Developer**  
ServiceNow Admin

  
**Tester**  
QA & Validation

  
**Designer**  
Flow & UX Design

  
**Lead**  
Project Manager

 **SELECTED PROBLEM STATEMENT**  
IT Helpdesks waste 20%+ of agent time manually categorizing and routing incident tickets. End-users are forced to pick from complex technical dropdowns they don't understand, leading to misrouted tickets, slower resolution, and frustrated users.

#### Step-2: Idea Generation (Brainstorming)

The team brainstormed 4 possible solutions: (1) Keyword-based auto-classification using Flow Designer, (2) ML-based Predictive Intelligence, (3) Manual Category dropdowns, and (4) Custom Chatbot triage. After evaluation, Idea 1 was selected for its low effort, high impact, and zero dependency on training data.

## Step-2: Idea Generation (Brainstorming)

💡 **IDEA 1 — SELECTED**

**Keyword-Based Auto Classification**

Use Flow Designer to parse the Short Description field for keywords (WiFi, Projector, Password, Slow) and auto-assign Category & Subcategory instantly on ticket creation. Zero manual effort.

💡 **IDEA 2**

**ML-Based Predictive Intelligence**

Train ServiceNow's built-in Predictive Intelligence model on historical ticket data to classify tickets using NLP. Higher accuracy but requires large training dataset.

💡 **IDEA 3**

**Manual Category Dropdown**

Add a mandatory Category dropdown on the form and force users to select the correct category themselves. Simple but causes user frustration and errors.

💡 **IDEA 4**

**Custom Chatbot Triage**

Build a virtual agent chatbot that asks users a series of questions to determine the correct category. Interactive but complex to build and maintain.

✅ **SELECTED IDEA FOR IMPLEMENTATION**

**Idea 1: Keyword-Based Auto Classification via Flow Designer**

## Step-3: Idea Prioritization

After generating all 4 ideas, the team evaluated each one using a 2x2 Impact vs Effort matrix. Each idea was plotted based on its implementation effort (Low to High) and its potential business impact (Low to High). The results are as follows:

- Quick Win (High Impact, Low Effort): Keyword-based Auto Classification via Flow Designer - **SELECTED** for implementation.
- Major Project (High Impact, High Effort): Full NLP/ML Model using Predictive Intelligence - planned as future upgrade.
- Fill-In (Low Impact, Low Effort): Manual Category dropdowns for users - rejected due to poor UX.
- Thankless Task (Low Impact, High Effort): Building a custom chatbot from scratch - rejected due to complexity.
