

Problem-Solution Fit

Date	25 September 2026
Team ID	6ab2220abee0b08a2d2c65d0
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5 Marks

Problem-Solution Fit Canvas: Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS]	6. CUSTOMER LIMITATIONS [CL]
IT Help Desk End Users (Employees) who submit support tickets for network, hardware, access, and performance issues.	Limited technical knowledge to correctly categorize their own tickets. No access to internal routing systems.
5. AVAILABLE SOLUTIONS PROS & CONS [AS]	2. PROBLEMS / PAINS + FREQUENCY [PR]
Manual triage by L1 agents (slow, error-prone). Dropdown-based forms (confusing for users). ML models (costly, need training data).	Tickets misrouted daily (High frequency). Long resolution time due to manual triage. User frustration from lack of updates.
9. PROBLEM ROOT / CAUSE [RC]	7. BEHAVIOR + INTENSITY [BE]
No automated system to parse natural language and assign categories. Reliance on human reading of every ticket.	Users type issues in plain English (High). Agents manually read each ticket (High). Delayed emails cause repeat tickets (Medium).
3. TRIGGERS TO ACT [TR]	10. YOUR SOLUTION [SL]
IT issue occurs (Wi-Fi down, projector fails, forgotten password). User needs to report and track the issue.	ServiceNow Business Rule that parses Short Description keywords and auto-assigns Category + Subcategory + Email notification.
8. CHANNELS OF BEHAVIOR [CH]	4. EMOTIONS BEFORE / AFTER [EM]
ONLINE: ServiceNow Service Portal, Email, Mobile App. OFFLINE: Walk-in to IT Help Desk.	BEFORE: Frustrated, anxious, helpless. AFTER: Relieved, confident, satisfied that ticket is being handled.
