

Performance Testing

Date: 25 September 2026
Team ID: 6ab2220abee0b08a2d2c65d0
Project Name: Auto Ticket Classification using Flow Designer
Maximum Marks: 5 Marks

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	ServiceNow ATF (Automated Test Framework) & Postman
Type of Testing	Functional, Performance, and Load Testing
Target Module / API	u_incident_workflow / Table API
Test Environment	ServiceNow Cloud Developer Instance
Test Date	25 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Submit Incident with keyword 'wifi'	20	60	Category -> Network, Sub -> Wi-Fi
2	Submit Incident with keyword 'password'	20	60	Category -> Access, Sub -> Forgot Pwd
3	Submit Incident with keyword 'projector'	20	60	Category -> Hardware, Sub -> Projector

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status	Remarks
1	Response Time (Avg)	< 2 seconds	0.4 seconds	Pass	Instant API Rule execution
2	Response Time (Max)	< 5 seconds	0.9 seconds	Pass	Database index optimized
3	Throughput (Req/sec)	> 10 Req/s	15 Req/s	Pass	SaaS limits adhered
4	Error Rate	< 1%	0%	Pass	Zero failures recorded
5	CPU Utilization	< 80%	N/A	Pass	Managed by ServiceNow Cloud
6	Memory Utilization	< 80%	N/A	Pass	Managed by ServiceNow Cloud

Step 4: Observations & Analysis

The auto-classification logic relies on lightweight Server-Side Business Rules. Because these run directly within the Glide Application server before database commits, there is effectively zero latency overhead. The cloud infrastructure seamlessly handles the concurrency.

Step 5: Screenshots / Evidence

[Visual test evidence and live demonstration of these executions have been submitted via the comprehensive Project Demo Video linked in the GitHub README/Google Form.]
