

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	25 September 2026
Team ID	6ab2220abee0b08a2d2c65d0
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Ingestion	Create custom table u_incident_workflow Enable Auto-Numbering Configure Caller, Category, Subcategory fields
FR-2	Automated Classification	Trigger Flow Designer on Record Insert Parse Short Description for keywords (WiFi, Projector) Update Category and Subcategory
FR-3	User Notification	Configure Event Trigger Send confirmation Email to Caller Include dynamic ticket details in email body
FR-4	Reporting & Dashboard	Generate Pie Chart report (Tickets by Category) Generate Bar Chart report (Tickets by State) Create List Report for all incidents
FR-5	Deployment & Update Set	Create Update Set for all project artifacts Complete and export Update Set as XML Validate deployment to target instance
FR-6	Testing & Validation	Test auto-classification with multiple keyword inputs Verify email notification delivery Validate edge cases (unknown keywords remain uncategorized)

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system must classify tickets in the background without interrupting the user portal experience.
NFR-2	Security	Only IT agents should be able to view and modify the automated classification rules.
NFR-3	Reliability	The Flow Designer logic must execute consistently for 99.9% of incoming tickets.
NFR-4	Performance	Ticket classification must occur within 2 seconds of record insertion.
NFR-5	Availability	The ServiceNow instance must maintain 99.9% uptime. The Flow Designer rule must remain active

		and functional during scheduled maintenance windows.
NFR-6	Scalability	The solution must scale to handle 500+ tickets per day without performance degradation. New keyword categories can be added without code changes (configuration-only).
