

Project Design Phase
Proposed Solution Template

Date	25 September 2026
Team ID	6ab2220abee0b08a2d2c65d0
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	IT Helpdesks are overwhelmed with manually categorizing incoming incident tickets, leading to slower resolution times, human errors in routing, and frustrated end-users.
2.	Idea / Solution description	An automated ServiceNow workflow using Flow Designer that parses incoming incident descriptions for keywords (e.g., "WiFi", "Projector") and instantly assigns the correct Category and Subcategory in the background.
3.	Novelty / Uniqueness	Instead of relying on non-technical users to guess the correct technical categories from complex dropdowns, the system uses natural language keywords to silently classify the ticket, providing a frictionless user experience.
4.	Social Impact / Customer Satisfaction	Dramatically reduces Mean Time To Resolution (MTTR). End-users experience faster support, and Level-1 IT agents are freed from monotonous administrative triage tasks, reducing burnout.
5.	Business Model (Revenue Model)	Internal IT Cost Savings model. By eliminating manual triage, the organization saves thousands of hours annually in Level 1 support time, directly reducing operational expenditure (OpEx) and increasing IT efficiency.
6.	Scalability of the Solution	Highly scalable. Built on ServiceNow cloud architecture. It can easily be expanded by adding new keyword logic, or smoothly upgraded to advanced Machine Learning (Predictive Intelligence) in the future.
